News release

Saudi Aramco Energy Ventures leads Series A investment round in emissions reduction innovator Daphne Technology SA.

Dhahran, Saudi Arabia; Brussels, Belgium; and Lausanne, Switzerland. December 20th 2018 – Daphne Technology SA, an innovator in emissions mitigation technology for the shipping industry, announces it has closed a significant series A financing round. The financing round was led by Saudi Aramco Energy Ventures (SAEV), the corporate venturing subsidiary of Aramco, a global integrated energy and chemicals company, and joined by The Innovation Fund, a Belgian fund active in the fields of chemistry and life sciences.

Daphne Technology's innovation reduces harmful air emissions from the exhaust of commercial marine vessels, allowing them to be compliant with current and pending International Maritime Organisation (IMO) regulations economically and sustainably. The technology transforms the pollutants into valuable by-products (agricultural fertilisers) and thus is fully circular, producing no waste. This is in contrast with current solutions that produce waste chemicals that are discharged in expensive facilities or into the ocean when allowed. Daphne provides the industry an option to be ecological and sustainable while giving adopters a competitive edge.

Richard Riggs of SAEV Europe commented "We see Daphne's technology as having the potential to provide significant benefits to the global shipping industry - both environmental and economic- in light of the imminent IMO 2020 regulation. We are proud to include Daphne and its team as members of the SAEV portfolio".

Mario Michan, CEO of Daphne Technology, commented "We are delighted to announce this funding round which will allow us to to implement an industrial size pilot of our technology, reach certification and start commercialisation. We expect to enter the market in 2019. We look forward to working with SAEV and The Innovation Fund and leveraging their industry network."

François Cornélis, Chairman of The Innovation Fund, stated: “We consider the roll out of Daphne’s technology as a game changer for the shipping and refining industries given the upcoming stricter IMO regulation on fuel consumption and the knock-on effects of this regulation.”

About Saudi Aramco Energy Ventures

Saudi Aramco Energy Ventures LLC (SAEV) is the corporate venturing subsidiary of Aramco, the world’s leading fully integrated energy and petrochemical enterprise. Headquartered in Dhahran with offices in North America, Europe and Asia, SAEV’s mission is to invest globally in start-up and high growth companies with technologies of strategic importance to Aramco.
